

Aleksey Kuznetsov

Senior iOS Engineer

zummenix@gmail.com / [LinkedIn](#) / [GitHub](#) / [Telegram](#) / [Instagram](#)

Drafted with AI assistance and carefully reviewed, verified, and edited by me.

Summary

Senior iOS engineer with 13+ years of professional experience in Swift and Objective-C, and 16+ years of programming overall. I own work end-to-end — architecture, migrations, analytics, tests, and release — and I consistently gravitate toward the cross-cutting engineering that lifts an entire platform rather than a single screen. Across 4+ years at Кошелёк I shipped flagship product areas behind A/B tests, led authentication and networking migrations, removed tens of thousands of lines of technical debt, and served as tech lead and mentor. I write documented, tested, readable code, automate what repeats, and bring AI-assisted developer tooling into my daily workflow.

Highlights

- **13+ years** of professional iOS development; **16+ years** programming overall; **20+ projects** shipped across fintech, health, automotive, and event-tech
- Led large-scale migrations: T-ID (Auth), networking layer, and removal of **~81k lines** of legacy UI
- **Tech lead & mentor** — coordinated a team of 2+ engineers and trained several iOS developers
- **Product-minded** — A/B testing, feature flags, remote configuration, and analytics instrumentation with automated test coverage

Skills

- *Languages* – Swift, Objective-C; working knowledge of TypeScript/React and Rust
- *Apple Frameworks* – UIKit, GCD, CoreGraphics, CoreBluetooth, AVFoundation, XCTest
- *Architecture* – MVC, MVVM, MVVM + Coordinators, MVP
- *Concurrency & Reactive* – Swift Concurrency, GCD, Combine
- *Networking* – REST, multipart uploads, retry infrastructure, Alamofire
- *Data & Storage* – CoreData, Realm
- *Quality & Testing* – TDD, XCTest, UI tests, test automation; SwiftLint, SwiftFormat
- *CI/CD* – Fastlane, GitHub Actions, Gitlab
- *UI & Design* – Auto Layout and frame-based layout; Figma, Sketch
- *Collaboration* – Jira, GitLab/GitHub

Work Experience

Senior iOS Engineer

March 2022 to September 2026 / [Кошелёк / Т-Банк](#)

[Кошелёк](#)

Owned work end-to-end for 4+ years across authentication, flagship product features, and large-scale platform modernization — shipping features gated behind A/B tests with full analytics and automated tests, migrating the auth and networking layers, and repeatedly cutting tens of thousands of lines of technical

debt. I consistently combined product delivery with cross-cutting engineering (networking, observability, tooling) that lifted the whole platform, not just individual screens.

Selected impact:

- **2022** – Onboarding to the codebase: CocoaPods→SPM migration, server-driven UI foundation, auth/token refactor, new passcode/biometrics protection, OTP access recovery, account deletion.
- **2023** – Tinkoff ID / SSO authentication platform migration, referential auth, new registration and onboarding, analytics-platform migration, promotions and support-chat features.
- **2024** – Built the entire **"Выгода" (Benefits) tab** from scratch; removed AsyncDisplayKit (~81k lines); introduced the A/B and remote-config platform (RemoteConfigsKit).
- **2025** – Coupons→Promocodes product consolidation, electronic loyalty-card (ЭЛЛ) issuance, ad opt-out feature, new Balance and Card Catalog screens, networking retry infrastructure.
- **2026** – Unified advertising platform (OffersKit/T-Ads) rollout, new-user onboarding, iOS 16 migration of all packages, networking-layer migration and legacy retirement, developer-agent tooling.
- *Leadership* – Served as tech lead for a period in the middle of the role, mentoring and coordinating a team of 2+ engineers.
- *Developer tooling* – Set up and iterated the **Nessy developer-agent** configuration and skills for the repo (2026), including A/B-test and API-method skills enabling agent-driven development.
- *Areas of expertise* – iOS/Swift (UIKit, server-driven UI, Swift concurrency, SPM/CocoaPods, SwiftGen/Sourcery); authentication & identity (SSO, token refresh, biometrics/passcode, account lifecycle, authorization flows); networking & architecture (network-layer design and migrations, retry infrastructure, REST, multipart uploads, SSL pinning); product delivery at scale (flagship screens, A/B testing and feature flags, remote configuration, deep links); reliability & performance (crash fixes, dead-code elimination, dependency cleanup, build/test stability); analytics & testing (event instrumentation, analytics migrations, functional and analytics test automation).
- *Tech* – Objective-C, Swift

T-банк

- *Participation* – June 2026 to September 2026 – Prepared the Cards and Clubs feature for web technologies: entry points with webview fallback screens and two-way web-to-native communication. Implemented and deployed a new Special Project Entry Point block on the Receipt Offer screen. Fixed bugs on the web side and ramped up on TypeScript and React.
- *Tech* – Swift, TypeScript, React

iOS Engineer

November 2021 to March 2022 | [Akvelon](#)

[Reddit](#)

Official Reddit app

- *Participation* – Took part in converting the app's core from Objective-C to Swift. Efforts to modularize the monolith and facilitate modularization for other teams. Detailed actions to remove some singleton usages throughout the whole app. General code improvements and app's stability improvements.
- *Tech* – Objective-C, Swift

iOS Developer

September 2013 to October 2021 | [Очень Интересно \(Saritasa\)](#).

Developed iOS applications of varying complexity from start to finish; built new features and fixed bugs in existing apps; communicated with backend teams, TMs and PMs; conducted code review; mentored other iOS developers, set and split tasks.

Notable projects:

ICON Intelligent Control

iPhone app – adjust ICON Vehicle Dynamics electronic shocks

- *Participation* – Implemented a custom communication protocol over Bluetooth with the ICON Vehicle Dynamics box; communication and firmware update logic; UI.
- *Tech* – Swift, CoreBluetooth, Alamofire

Masimo Radius T°

iPhone app – Continuous Thermometer

- *Participation* – Custom implementation of the temperature timeline graph component; UI and logic for temperature and sensor notifications.
- *Tech* – Swift, CoreGraphics, CoreBluetooth, Realm

Steady Head

iPhone app – Golf Swing Trainer

- *Participation* – UI; face detection and video recording of the swing; logic of detecting a good/bad swing.
- *Tech* – Swift, Vision and ReplayKit frameworks

DigitalEMS

iPad app for paramedics in USA

- *Participation* – Implemented new features and bug fixes; refactored and transitioned the project to use ARC; wrote unit tests for critical parts.
- *Tech* – Objective-C, AFNetworking, Cordova, ZOXSerie

uSummit

iPhone/iPad app – event management platform

- *Participation* – UI and logic for several modules; fixed bugs and implemented new features.
- *Tech* – Swift, Alecrim CoreData, PromiseKit, Swagger

Helpjess for iPhone

iPhone app – Virtual shop with ability to video call a merchant

- *Participation* – UI and logic for several parts of the app; video call functionality.
- *Tech* – Swift, Moya, RxSwift

Adjuster

July 2008 to December 2012 | [АЗОТ \(УРАЛХИМ\)](#).

Installation and adjustment of instrumentation and automation equipment.

Education

Associate in Automation of technological processes and production

September 2004 to June 2008 / Berezniki Polytechnic College
